

JUNIOR AVIATION AVIATION HIGH

This year Aviation High School is trying to involve the junior school in more aviation related activities.

During lunchtimes on Tuesday and Wednesday, a remote control flying group has been established for students with little or no abilities to learn the various skills needed to participate in this hobby. Apart from flying small simple aircraft, students are also leaning about the mechanics and electronics of flying these models. This includes battery charging and care, establishing links between remote transmitters and the aircraft themselves and general maintenance and repairs.

On Thursday and Friday lunchtimes, the flight simulators are being made available to the junior grades to allow them to not only access the flight simulators for enjoyment, but to also learn from senior students the basics of aeronautics and aviation. This will give these participating students good background information to take with them into the senior aerospace subject areas.
