INTRODUCTION

Year 10 is considered a foundation year where students focus on establishing their pathway through Senior School. The year 10 course is the bridge between the Junior Secondary Phase of School and the Senior Secondary Phase of School. It is a time for students to consolidate their studies where appropriate; a time for students to extend themselves in appropriate areas and a time for students to make important decisions about future career aspirations. In Year 10, students will study **English, Science and Mathematics** plus **one semester** each of **History** and **HPE**. Students will also have the choice of **four Electives of Study**, two in each semester.

ACARA Core

Subject	MATHS	ENGLISH	SCIENCE	Elective Semester 1		
Semester 1	Compulsory and studied for whole year	Compulsory and studied for whole year	Compulsory and studied for whole year	History	One semester unit chosen	One semester unit chosen
Semester 2				Elective Semester 2		
				HPE	One semester unit chosen	One semester unit chosen

A MESSAGE TO PARENTS

Parents can help their children to be successful in gaining satisfaction – both personal and academic – from each experience at school.

You should:

- not assume responsibility yourself but rather, support your student to develop the personal responsibility for their own education
- ask your student questions about school. Find out how students interpret what is going on at school
- develop a relationship with your students teachers through phone or email
- ensure that there is a suitable place to study in the home
- ask to see your student's books, tasks and homework.

In short, show an interest in what is happening and help your student to develop habits of industry and responsibility with regard to his/her education.

GUIDELINES - KEEP YOUR OPTIONS OPEN

Many Year 9 students have thought about their future, but are still uncertain about courses or careers they would like to follow after they have finished school. It is wise, therefore, to try to keep all options open.

As an overall plan, it is suggested that students choose subjects:

- they enjoy
- in which they have already had some success
- which the student feels are related to careers which are of interest to them
- which will develop skills, knowledge and attitudes useful throughout life.

When investigating a subject to see if it is suitable, find out about the content (i.e. what topics are covered) and how it is taught and assessed. For example: does it mainly involve learning from a textbook? Are there any field trips, practical work, or experiments? How much assessment is based on exams compared to assignments, theory compared to practical work, written compared to oral work?

THINK ABOUT CAREERS

It is helpful for students to have some ideas about possible career choices at this stage, even though they may change plans or review decisions in the future. For help with career exploration students should talk to the guidance officer and check the following sources of information on subjects, courses and careers.

- My Future – <https://myfuture.edu.au>
- Skillsroad – <https://www.skillsroad.com.au>
- The Good Careers Guide – <https://www.gooduniversitiesguide.com.au>
- Higher Education – for careers requiring University and Diploma Study (see Guidance Officer)
- Tafe Study – see Senior Schooling HOD

After checking through this information, it is likely that a list of subject areas needed for courses and careers that interest the student can be made. If details are still unclear, check with the guidance officer. Students have been working through career education in their Welfare lessons.

MAKING DECISIONS

It is important to remember that all students are individuals, each with particular needs and requirements that are quite different from those of other students. This means that it is unwise to either take or avoid a semester unit because:

- someone said that you will like or dislike it
- your friends are, or are not taking it
- you like or dislike the teacher
- “all the boys, or, all the girls take it” (all have equal value for males and females).

Students need to be honest about their abilities and realistic with their career aims. There is little to be gained by continuing with or taking advanced levels of subject areas that have proven to be unsuccessful; even after great effort. Similarly, if career aims require the study of certain subject areas; does the student have the ability and determination to work hard enough to achieve the necessary level of results in those subjects?

ATAR & VET

Assessment in Years 11 and 12

Subject results in General subjects will be based on student achievement in four summative assessments — three internal assessments and one external assessment that QCAA sets and marks. Subject results in Applied subjects will be based on student achievement in four internal assessments.

For most General subjects, the internal assessment will contribute 75% to the final subject result, except in mathematics and science subjects, where it will contribute 50%.

External assessment will be in all General subjects, but it will not be used to scale a student's internal assessment result. Instead, the external assessment result will be added to the internal assessment result to arrive at a final subject result.

QCAA will endorse internal assessment instruments before they can be used for summative purposes in schools.

QCAA will confirm the grades schools award by reviewing a selected sample of student work for every subject in every school.

A network of trained assessors will ensure the quality and rigour of assessment and students' results.

Queensland Certificate of Education (QCE)

All students who complete Year 12 will receive a Senior Statement, which is a transcript of their results. Eligible students will also receive a QCE.

Students will be awarded an overall numerical score and a level of achievement (A–E) for each General subject. Applied subjects will be reported using a level of achievement only.

Tertiary Entrance Requirements (ATAR)

The QCAA will no longer issue Tertiary Entrance Statements.

The Australian Tertiary Admission Rank (ATAR) is used for University entrance from Year 12. An ATAR is a number between 0.00 and 99.95. ATARs increase in increments of 0.05.

The Queensland Tertiary Admissions Centre (QTAC) will calculate ATARs from students' results using a process of inter-subject scaling.

An ATAR will be calculated from an eligible student's best four general, plus one applied, or four General plus one competency based qualification @ Cert 1 or above.

Students must satisfactorily complete a QCAA English subject (C or better) to be eligible for an ATAR. However, a student's result in English will only contribute to their ATAR if it is one of their five best subject results. ATAR's are primarily used for when student apply for tertiary places.

Tertiary Entrance Process

QTAC will be responsible for tertiary entrance in Queensland.

The ATAR, calculated by QTAC, will be the primary mechanism used for school leavers seeking entrance to tertiary study in Queensland.

QTAC will no longer operate schedules for ranking students who are ineligible for an ATAR.

QCAA 2023 Senior Subjects

A full list of QCAA subjects can be located:

<https://www.qcaa.qld.edu.au/senior/new-snr-assessment-te/redev-snr-syll>.

The following list represents subjects offered in Year 11 2023.

General subjects are suited to students who are interested in pathways beyond senior secondary schooling that lead to tertiary studies and to pathways for vocational education and training and work.

Applied subjects are suited to students who are primarily interested in pathways beyond senior secondary schooling that lead to vocational education and training or work.

English	General
Essential English	Applied
Physical Education	General
Recreation	Applied
Accounting	General

Year 10 Subjects

ENGLISH

COURSE OVERVIEW

English is central to the learning and development of all students. It helps create confident communicators, imaginative thinkers and informed citizen. It is through the study of English that individuals learn to analyse, understand, communicate and build relationships with others and the world around them.

The study of English helps young people develop the knowledge and skills needed for education, training and the workplace. It helps them become ethical, thoughtful, informed and active members of society. English also helps students to engage imaginatively and critically with literature to expand the scope of their experience. Aboriginal and Torres Strait Islander peoples have contributed to Australian society and to its contemporary literature and its literary heritage through their distinctive ways of representing and communicating knowledge, traditions and experience.

Units of work in Year 10 include:

- Satire
- Novel Study
- Shakespearean Drama
- Media Study

HOME STUDY REQUIREMENTS

Wide reading, viewing, writing, discussing issues with family and researching constitute the regular home study in English. Year 10 students are expected to undertake 30 minutes home study following each lesson of the week.

ASSESSMENT SUMMARY

There will be a range of written and spoken assignments and in class tests in English.

HUMANITIES

COURSE OVERVIEW

History is a story, told by many story tellers, that links the past to the present. Through an understanding of their own and others' stories, students develop an appreciation of the richness of the human past and its implications for the future.

The content of the history curriculum is based on the interrelationship between historical knowledge, understanding and skills.

Geography is the study of the physical environment and how we interact with it. By developing an understanding of this relationship we are able to help and sustain a viable world for the future.

Strong connections exist between these 2 two disciplines of Humanities and the English and Mathematics syllabuses. Literacy and Numeracy skills are deeply embedded in historical understanding and geographical data and representations.

Topics for study in Year 10 may include:

- Rights and Freedoms
- Australia in the World
- Geographies of Interconnectedness
- Geographies of Well-being

All of these topics provide pre-requisite skills needed for the students if they decide to study Geography or Modern History in senior.

HOME STUDY REQUIREMENTS

Reading, researching, writing, discussing issues with family, problem-solving and practical tasks constitute the regular home study of Humanities. Year 10 students are expected to undertake 30 minutes home study following each lesson.

ASSESSMENT SUMMARY

There will be a range of written and spoken assignments and in class tests. These will require students to problem solve, explain, research, analysis data and historical information and graphically represent information.

MATHEMATICS

COURSE OVERVIEW

In Year 10 Mathematics, knowledge and understanding, together with the ways of working, provide mathematical understandings and skills to help students identify and undertake pathways for their senior education.

The ways of working provide a unique and coherent framework of processes of mathematical analysis and justification. Thinking, reasoning and working mathematically are essential elements of learning about and through mathematics.

Mathematical knowledge is dynamic because it is socially, culturally and historically constructed, responding to changing needs and expectations while also creating conditions for change. Mathematical understanding involves making connections among ideas, facts, concepts and procedures. Knowledge and understanding in Mathematics is organised by, and developed through, five interrelated organisers:

- Number and algebra
- Measurement and geometry
- Statistics and probability.

Year 10 Mathematics leads directly into the study of Essential Mathematics, General Mathematics, Mathematics Methods and Specialist Mathematics. Our students are sorted into classes at the beginning of Year 10 on the basis of their previous successes in mathematics so that they are able to proceed through the Year 10 learnings at a pace that will allow them to be fully prepared for Senior Mathematics. Students' achievement at the end of year 9 will determine placement in ACARA math 10 or math 10A programs and this will be determined by the Head of Department. Math 10A is an accelerated course that prepares students for advanced senior maths courses. Successful completion of Math 10A is a requirement for entry to Year 11 Mathematical Methods and Specialist Mathematics courses. There may be some flexibility between classes as the year progresses.

HOME STUDY REQUIREMENTS

Student achievement results are generally at a higher standard when some review and study is completed each day at home. Teachers will sometimes set homework but students should be applying study skills to consolidate their own learning each day at home whether homework is set or not. In addition, there will be assignment tasks to be completed which also contribute towards term grades. Grading of student work is in keeping with the processes that are applied to Senior Mathematics.

ASSESSMENT SUMMARY

Students demonstrate evidence of their learning over time in relation to the following assessable elements:

- Understanding
- Fluency
- Problem solving
- Reasoning.

Grades for each assessment period are derived from the accumulation of demonstrated achievement in assignment work and structured written tests in class. All students are given the opportunity to demonstrate their skills in extension topics throughout the program.

ADDITIONAL INFORMATION

There are a number of on-line tutorial materials available that cover each topic in the learning program. These are especially useful in building student confidence in mathematical operations. Subject selections for the senior school will be guided by student success and career aspirations in this course.

HEALTH & PHYSICAL EDUCATION

COURSE OVERVIEW

In Health and Physical Education, students develop the skills, knowledge, and understanding to strengthen their sense of self, and build and manage satisfying, respectful relationships. They learn to build on personal and community strengths and assets to enhance safety and wellbeing. Students learn to navigate a range of health-related sources, services and organisations.

At the core of Health and Physical Education is the acquisition of movement skills and concepts to enable students to participate in a range of physical activities. As a foundation for lifelong physical activity participation and enhanced performance, students acquire an understanding of fitness components, energy systems and fuel for physical activity.

The course is divided into theory and practical units.

THEORY UNITS

- Mental Health and Health Promotion
- Exercise Science and Energy Systems

PRACTICAL UNITS

- Touch
- Volleyball
- Athletics
- Basketball/ Netball
- Gym

*These may change based on weather, student numbers, available teaching spaces and theory units studied.

HOME STUDY REQUIREMENTS

This subject requires students to complete home study task. This includes revising lesson content, completing class tasks and preparing for assessment with exam preparation or assignment writing. Students will have home study every week.

ASSESSMENT SUMMARY

Assessment is continuous throughout the course with 50% of the mark consisting of research assignments and essays. The remaining 50% of the subject mark is made up by results from the students' physical performance across the practical units studied.

ADDITIONAL INFORMATION

For practical components of the course, students must wear the correct Aviation High sports uniform and broad-brimmed sports hat. Students are to wear enclosed black leather shoes suitable for physical activity. A student unable to participate in the lesson must provide the teacher with a note explaining the circumstances why they are not participating at the beginning of the lesson. Students will be given relevant theory work to do or assist with the lesson delivery.

SCIENCE

COURSE OVERVIEW

Science is a dynamic, collaborative and future-thinking field of human endeavour that has emerged through a need to understand natural phenomena. Scientific understandings are constructed using theories, laws, models and concepts — they are open to questioning and are developed and modified over time. The discipline of science employs methods for observing the world, making predictions and testing hypotheses. It values ethical inquiry and a respect for evidence. Science contributes to the development of a sense of wonder and engagement with the natural world.

Science as a school subject is practical, with experiments and hands-on investigations at its heart. Practical activities engage students, producing excitement and curiosity. Investigations develop a deeper understanding of the nature of science and of a particular topic or context. They foster problem-solving skills that are transferable to new situations.

Science learning in Year 10 continues the development of scientifically literate individuals who:

- are able to connect scientific knowledge to everyday life and the world around them
- are interested in and can talk meaningfully about science
- can identify scientific questions, and investigate and draw evidence-based conclusions
- are skeptical and questioning of claims made by others
- can make informed decisions about the environment and their own health and wellbeing.

The Year 10 Science learning area leads directly into the study of Biology, Chemistry, Physics and Science in Practice in Year 11. Students will complete Year 10 science in Semester 1 and then be able to select a specialty science for Semester 2.

HOME STUDY REQUIREMENTS

Much of the report writing will be completed during home study time but students will also be expected to complete research tasks and learning review activities on a regular basis. Research has shown that home study can have a significant impact on achievement in science.

ASSESSMENT SUMMARY

Students will be engaging with a wide variety of practical learning tasks. These will be complemented by regular written reports which will feature in the overall assessment of the course supplemented by formal tests and extended writing assignment tasks.

ADDITIONAL INFORMATION

There are a range of free digital textbooks to assist with Science so having a digital device in class would be beneficial.

ELECTIVES

AEROSPACE STUDIES

COURSE OVERVIEW

The aerospace industry is characterised as a highly structured and ordered environment, and Aerospace Studies provides students with an opportunity to gain an understanding of the underlying principles of aviation and aerospace, including the structure, management and regulation of aviation and aerospace businesses and enterprises.

Students will use our Flight Simulation facility to aid in learning the different aspects of the course content.

The two primary areas of study are:

- Aeronautics and Astronautics
- The Business of Aviation and Aerospace

The four themes used to gain understanding of the two areas of study at Aviation High School are:

- Basic Aeronautical Knowledge
- History of Aviation and Aerospace
- Construction and Design
- Business and profitability of the Aerospace Industry

Students may focus on different aircraft during the course to consolidate the concepts being taught.

HOME STUDY REQUIREMENTS

Students are expected to review class work regularly and Year 10 students are expected to undertake 30 minutes home study following each lesson.

EXCURSIONS

There may be some opportunity for field trip experiences to local and other sites which may involve travel costs. In some excursions the expenses may be covered by the industry partners and are aimed at giving students exposure to various aviation industries.

ASSESSMENT SUMMARY

The assessment program may include a range of:

- written tests
- extended written responses
- Design Folio

APPLIED AEROSPACE STUDIES

COURSE OVERVIEW

The aerospace industry is characterised as a highly structured and ordered environment, and Aerospace Studies provides students with an opportunity to gain an understanding of the underlying principles of aviation and aerospace, including the structure, management and regulation of aviation and aerospace businesses and enterprises.

Students will use our Flight Simulation facility to aid in learning the different aspects of the course content.

The two primary areas of study are:

- Aerospace Systems and Structures
- Human Factors

The four themes used to gain understanding of the two areas of study at Aviation High School are:

- Introduction to Aircraft Systems
- Construction and Design
- Safety Management Systems
- Human Factors in Aviation

HOME STUDY REQUIREMENTS

Students are expected to review class work regularly and Year 10 students are expected to undertake 30 minutes home study following each lesson.

EXCURSIONS

There may be some opportunity for field trip experiences to local and other sites which may involve travel costs. In some excursions the expenses may be covered by the industry partners and are aimed at giving students exposure to various aviation industries.

ASSESSMENT SUMMARY

The assessment program will include

- written tests
- extended written responses
- design folio

APPLIED TOURISM

COURSE OVERVIEW

Tourism is one of the world's largest industries, directly employing approximately 105 million people and accounting for 9.8% of the global gross domestic product. Tourism is also one of Australia's most important industries, assuming increasing value as a source of expanding business and employment opportunities.

In Tourism, students examine the socio-cultural, environmental and economic aspects of tourism, as well as tourism opportunities, problems and issues across global, national and local contexts. Tourism provides opportunities for Queensland students to develop understandings that are geographically and culturally significant to them by, for example, investigating tourism activities

related to local Aboriginal and Torres Strait Islander communities.

This course is an Introduction to the applied senior subject of Tourism. It is designed to give students a taste of the intellectual, technical, operational and workplace skills, needed to appreciate the role of the tourism industry, its structure, scope and operation of the related sectors of travel, hospitality and visitor services. Studying Tourism can establish a basis for further education and employment in businesses and industries such as tourist attractions, cruising, gaming, government and industry organisations, meeting and events coordination, caravan parks, marketing, museums and galleries, tour operations, wineries, cultural liaison, tourism and leisure industry development, and transport and travel. It prepares the student to be a valuable member of staff in a tourism business or venture.

Studying Tourism can lead to:

- government and industry organisations
- meeting and events coordination
- marketing
- tour operations
- cultural liaison
- tourism and leisure industry development
- transport and travel.

COURSE ORGANISATION

The topics studied across the course may include:

- Types of Tourism
- Tourism sectors
- Tourism Data and its use
- Marketing
- Attractions/Theme Parks in Queensland and Australia

ASSESSMENT

Assessment items each year selected from:

- Short response test
- Data Analysis
- Presentations
- Reports.

There will be opportunities to visit Tourism sites, Attractions and Theme Parks as a vital part of their study program.

ART

COURSE OVERVIEW

Art offers a unique way for students to communicate and connect with their world using critical and creative thinking. In Year 10 students will further develop their ability to make and display 2D and / or 3D images and objects. Students will use visual language and expression to analyse, interpret, evaluate and reflect.

Students will respond to a range of concepts and focuses by working through a unit-based course of study.

UNITS OF STUDY:

- Printmaking techniques (Block and Intaglio) exploring the concept of 'Place'
- Found object sculpture exploring the use of material to generate social commentary
- Appraising Tasks - Analysis and evaluation of artworks (Elements & Principles)

HOME STUDY REQUIREMENTS

The general purpose of homework in this subject is to promote good study habits and attitudes, and to further develop students' skills. Specifically, home study will be used to have students complete work begun in class, to extend some advanced students, or to prepare students for their next lesson. In Art the Visual Diary has to be worked on in class and at home.

ASSESSMENT SUMMARY

Students are assessed on the making, appraising and display of their artwork. Assessment tasks will take the form of:

- creating 2D and/or 3D images and objects
- appraising tasks (short and/or extended written responses).

ADDITIONAL INFORMATION

This course allows for the development of individual art skills and interests. *Students who intend to undertake the Senior Visual Art Course in Years 11 and 12 should preferably have completed Year 10 Visual Art.*

BUSINESS STUDIES

COURSE OVERVIEW

The study of Business is relevant to all individuals in a rapidly changing, technology focused and innovation driven world. The knowledge and skills developed in Business will allow students to contribute meaningfully to society, the workforce and the marketplace and prepare them as potential employees, employers, leaders, managers and entrepreneurs of the future. As they start to become independent learners Business will teach them to manage finance, make good decisions about goods and services and to be aware of their legal rights and responsibilities as Business owners or consumers. This subject will introduce students to the practical application of business financial records. The subject focuses on preparation and interpretation of financial reports, business documents and book keeping principles.

COURSE OUTLINE

- Entrepreneurship
- Ideation and Venture Creation
- Communication
- International Business
- Events Management
- Stock market.

HOME STUDY REQUIREMENTS

Approximately 15 minutes home study is set per night. This is used to reinforce the objectives studied in class.

ASSESSMENT SUMMARY

Assessment is continuous and is class based. Teachers determine what is necessary to be tested in accordance with student needs.

ADDITIONAL INFORMATION

Year 10 Business Studies provides an opportunity for students to gain an understanding of the fundamentals skills required for success in Senior Accounting, Business or Certificate II in Business.

APPLIED BUSINESS STUDIES

COURSE OVERVIEW

This course will cover Intro to Economics and Intro to Accounting. This is relevant to all individuals in a rapidly changing, technology focused and innovation driven world. The knowledge and skills developed in Applied Business will allow students to contribute meaningfully to society, the workforce and the marketplace and prepare them as potential employees, employers, leaders, managers and entrepreneurs of the future. As they start to become independent learners, Applied Business will teach them to understand basic economic principles, manage finance, make good decisions about goods and services and to be aware of their legal rights and responsibilities as Business owners or consumers. This subject will introduce students to the practical application of business financial records. The subject focuses on preparation and interpretation of financial reports, business documents and book keeping principles.

COURSE OUTLINE

- Accounting Fundamentals and Transaction Analysis
- The Accounting Process and Double Entry System
- Preparation of Financial Reports.
- Spread sheets and Accounting
- Communication
- International Business
- Events Management
- Stock market.

HOME STUDY REQUIREMENTS

Approximately 15 minutes home study is set per night. This is used to reinforce the objectives studied in class.

ASSESSMENT SUMMARY

Assessment is continuous and is class based. Teachers determine what is necessary to be tested in accordance with student needs.

ADDITIONAL INFORMATION

Year 10 Applied Business Studies provides an opportunity for students to gain an understanding of the fundamentals skills required for success in General Economics, General Accounting, Business or Certificate II in Business.

Cert 3 UAV

COURSE OVERVIEW

This qualification is relevant to individuals operating remotely piloted aircraft systems (RPAS) within visual line of sight (VLOS), below 400 feet above ground level (AGL), in day visual meteorological conditions (VMC), outside of controlled airspace, greater than 3 nautical miles from an aerodrome, outside of populous areas.

Remote pilot duties include applying technical and non-technical aviation skills and knowledge within RPAS operational environments.

This qualification forms some of the requirements for certification by the Civil Aviation Safety Authority (CASA) as described in Civil Aviation Safety Regulation (CASR) Part 101 Division 101.F.3—Certification of UAV controllers.

Operational flight crew are to satisfy General and Aviation English Language Proficiency (ELP) requirements as directed by aviation regulatory authorities.

A total of 14 units of competency are completed:

- AVIE0001 - Operate aeronautical radio
- AVIF0013 - Manage human factors in remote pilot aircraft systems operations
- AVIF3023 - Apply regulations and policies during remote pilot aircraft systems operations
- AVIH3019 - Navigate remote pilot aircraft systems
- AVIK3002 - Use infotechnology devices in an aviation workplace
- AVIW3037 - Manage remote pilot aircraft systems pre- and post-flight actions
- AVIW3038 - Operate and manage remote pilot aircraft systems
- AVIY3073 - Control remote pilot aircraft systems on the ground
- AVIY3074 - Launch remote pilot aircraft systems
- AVIY3075 - Control remote pilot aircraft systems in normal flight
- AVIY3076 - Recover remote pilot aircraft systems
- AVIY3077 - Manage remote pilot aircraft systems in abnormal flight situations
- AVIY3078 - Manage remote pilot aircraft systems energy source requirements
- AVIZ3052 - Apply situational awareness in remote pilot aircraft systems operations

CHINESE

COURSE OVERVIEW

Students will show they can use spoken and written Chinese to initiate and sustain interactions in familiar and unfamiliar contexts. Year 10 Chinese will focus on the exchange of information, ideas and opinions in the Chinese dialect and make enquiries into the experiences and opinions of others, using question words to elicit more information. The student responds to narratives, identifying language features that do not translate easily between cultures, mediating these ideas and expressing insights in Chinese while adjusting language use for different audiences.

Student writing will organise ideas according to themes or sequences events using specific time words.

HOME STUDY REQUIREMENTS

Students will be expected to practice their spoken and written use of the Chinese language through set tasks.

ASSESSMENT SUMMARY

The assessment instruments completed across this course will consist of the following modes:

- Examination — written response
- Examination — spoken
- Portfolio tasks

ADDITIONAL INFORMATION

To study Year 10 Chinese students must have completed Year 9 Chinese.

DATA ANALYTICS

COURSE OVERVIEW

90% of all data in existence today was created in the past two years. With the explosion of data collection comes the need for people to work out what it means, so Aviation High School's Data Analytics course introduces students to the world of data collection, processing and interpretation.

Our course is designed to build fundamental skills necessary for young people to analyse data to see emerging trends and patterns to aid problem-solving.

Topics for study in Year 10 include:

- Spread sheeting
- Regression
- Probability
- Data analysis
- Problem-solving
- Presentation skills
- Communication skills
- Coding.

HOME STUDY REQUIREMENTS

Students are expected to review class work regularly and build fluency in practical skills, such as spread sheeting and coding. Year 10 students are expected to undertake 30 minutes home study following each lesson.

ASSESSMENT SUMMARY

There will be a range of written, multimodal and web development assessments.

ADDITIONAL INFORMATION

This course will be helpful for:

- Students wishing to study Physics or Digital Solutions in Yr 11 and 12.
- Students who want to solve complex problems.

DESIGN TECHNOLOGY

COURSE OVERVIEW

Students will learn to communicate visually through the use of sketching, computer aided design and technical drawing. Students will be able to work in both 2D and 3D areas and will learn many foundation skills needed for more advanced Graphics.

Throughout the year the following areas will be explored

- Design and its application
- Sketching fundamentals will be reinforced and students will learn a variety of techniques and skills
- Rendering techniques will be demonstrated
- Plan reading and interpretation
- Company logo branding and design
- Computer aided design package.

Students will be engaged through many exciting and interesting activities throughout the year. They will cover the 4 themed areas which may include

- Mission Patch Logo Design
- Digital Camera
- Airport Check In Desk
- Baggage Tractor.

HOME STUDY REQUIREMENTS

Students will be expected to research some design exercised at home, and complete design planning and ideation development work when required.

ASSESSMENT SUMMARY

Students will prepare folios of work covering the three contextual units of study which will be assessed through the year using the organisers:

- Knowledge/Understanding
- Analysis and Application
- Synthesis and Evaluation
- All assessment will be in the form of classwork and home guided activity.

ADDITIONAL INFORMATION

This course will be:

- Of great assistance in interpreting and reading plans in the Aeroskills area
- Important for traineeship and apprenticeships in the trade areas
- Valuable for architectural and engineering and Graphic Design professions
- Helpful for developing skills for Senior Graphics.

DIGITAL MEDIA TECHNOLOGIES

COURSE OVERVIEW

By studying Digital Media, students will develop knowledge and skills in creative thinking, communication, collaboration, planning, critical analysis, and digital and ethical citizenship. They will develop the necessary critical and creative skills to reflect on and appreciate Australian and global cultures and make sense of what they see and experience. Digital Media will equip students for a future of unimagined possibilities with highly transferable and flexible thinking and communication skills.

Topics for study in Year 10 include:

- Infographics
- Photoshop
- Illustrator
- Canva
- advertising
- communication
- design

HOME STUDY REQUIREMENTS

Students are expected to review class work regularly and build fluency in practical skills, such as Canva and other forms of Digital Media. Year 10 students are expected to undertake 15 minutes home study following each lesson.

ASSESSMENT SUMMARY

There will be a range of written and practical assignments.

DRAMA

COURSE OVERVIEW

Drama offers students the opportunity to be exposed to realistic and non-realistic performances styles and engage with, as well as create drama that aims to challenge and empower young people. Students will explore the challenges that face adolescents, from decision making and risk taking, to identity, family relationships and social responsibility by exploring the concepts of 'rites of passage' and theatre for young people. Students will study 'Theatre for Young People' through a focus text and will have an opportunity to engage with a live theatre performance to develop awareness of how Theatre and Drama can be used to empower, challenge and educate audiences.

HOME STUDY REQUIREMENTS

The general purpose of homework in this subject is to promote good study habits and attitudes, and to further develop students' skills. Specifically, home study will be used to for students to rehearse performance tasks and complete written tasks.

ASSESSMENT SUMMARY

Students are assessed on the making, appraising and display of their artwork. Assessment tasks will take the form of:

- short and / or extended written responses
- performance tasks

ADDITIONAL INFORMATION

This unit prepares students for Senior Years 11 and 12 Drama through the development of scripted performance for an audience of peers.

EXTENSION PHYSICAL EDUCATION

COURSE OVERVIEW

This subject is highly recommended for students considering studying Senior Physical Education or Recreation Sport Studies in year 11 and year 12. This subject covers foundation topics for students who have an interest in health, exercise and training and have a desire for further study, work or participation in exercise science, human movement, sport psychology, coaching, training and recreational pursuits.

UNITS OF STUDY:

- Term 1; Coaching (Sport and Recreation)
- Term 2; Motor Learning and Body Movement Concepts (Senior Physical Education)

PRACTICAL UNITS

Coaching (students' choice of sport) and either Futsal / Soccer / Touch / AFL / Basketball / Netball

*These may change based on weather, student numbers, available teaching spaces and theory units studied.

HOME STUDY REQUIREMENTS

This subject requires students to complete home study task. This includes revising lesson content, completing class tasks and preparing for assessment with exam preparation or assignment writing. Students will have home study every week.

ASSESSMENT SUMMARY

Students will be required to complete practical demonstrations, assignment work and produce a multimodal presentation. Practical components will contribute towards the completion of theoretical tasks.

ADDITIONAL INFORMATION

For practical components of the course, students must wear the correct Aviation High sports uniform and broad-brimmed sports hat. Students are to wear enclosed black leather shoes suitable for physical activity. A student unable to participate in the lesson must provide the teacher with a note explaining the circumstances why they are not participating at the beginning of the lesson. Students will be given relevant theory work to do or assist with the lesson delivery.

FOOD AND NUTRITION

COURSE OVERVIEW

Students will consider factors that impact on design decisions and the technologies used to produce food products, services and environments. When producing designed solutions for identified needs or opportunities, students evaluate the features of technologies and their appropriateness for a food product. Students will create designed food product solutions based on a critical evaluation of needs or opportunities. Students communicate and document projects through a portfolio, including marketing for a range of audiences. They independently and collaboratively apply sequenced production and management plans when producing food designed solutions. They select and use appropriate technologies skillfully and safely to produce high-quality designed solutions suitable for the intended purpose. Possible careers include but are not limited to: Food Scientist, Marketing, Product development, Dietitian, Health inspector, Education.

The units covered in this subject include:

- Food Science – Students learn about the scientific processes which nutrients undergo when cooked or altered.
- Food Product design – Students will develop and innovative ice-cream flavour for a specified consumer market

Throughout these units students will:

- Critically analyse factors, including social, ethical and sustainability considerations, that impact on designed solutions for global preferred futures and the complex design and production processes involved
- Investigate and make judgments on the ethical and sustainable production and marketing of food
- Investigate and make judgments on how the principles of food safety, preservation, preparation, presentation and sensory perceptions influence the creation of food solutions for healthy eating.

HOME STUDY REQUIREMENTS

Students will be expected to conduct research for design ideas, complete design planning and refinement work when required.

ASSESSMENT SUMMARY

- Unit 1 – Exam
- Unit 2 – Project folio

ADDITIONAL INFORMATION

This course allows for the development of food and nutrition knowledge and practical application of the science of food. *Students who intend to undertake the Senior Food and Nutrition course in Years 11 and 12 should preferably have completed Year 10 Food and Nutrition.*

HEALTH

COURSE OVERVIEW

In this course students explore health as a dynamic quality of life. They examine the impact of social, environmental, economic and biomedical determinants on health and their collective contribution to health disparities, as well as exploring approaches to address barriers which prevent groups from experiencing better health. Students apply inquiry skills to examine and analyse health issues, develop arguments and draw evidence-based conclusions. The course also provides students with opportunities to develop skills that will enable them to pursue careers in any health-related field including medicine, health promotion, research or community health care.

COURSE ORGANISATION

Students will study two main Health Issues – Body Image and Homelessness. They will examine the Ottawa Charter as a framework and conduct investigations for analysis of these issues to make recommendations for improvement.

HOME STUDY REQUIREMENTS

Home study will be required to reinforce the objectives studied in class and work on assessment.

ASSESSMENT SUMMARY

The assessment instruments completed across this course will consist of the following modes:

- Term 1 – Assessment – Essay and Action
- Term 2 – Assessment – Essay

HOSPITALITY

COURSE OVERVIEW

The hospitality industry is one of the largest in Australia, predominately made up of small to medium businesses that provide a range of accommodation, food and beverage services. The inter-related nature of hospitality means that many businesses operate across sectors within the industry and across complementary industries such as tourism, travel and events. The restaurant and catering sector of the industry continues to experience growth with our increasingly time constrained society seeking the convenience of eating out.

The course is designed to provide students with appropriate learning opportunities that will enable them to acquire a range of technical, personal and interpersonal skills specifically related to the hospitality industry but applicable to other service industries and careers.

Units covered include:

- Hygiene and safety
- Interacting with customers and working with others
- Café food and beverages
- Prepare and serve simple dishes

HOME STUDY REQUIREMENTS

Students will be expected to conduct research for design ideas, complete design planning and refinement work when required. Also, out of class time will be required for functions.

ASSESSMENT SUMMARY

Through a portfolio of work and practical application students will demonstrate evidence and design ideas over the course of the unit in relation to the following assessable elements:

- Investigating
- Generating
- Producing.

ADDITIONAL INFORMATION

This course does have a cost involved to cover, food and resources \$100 for the semester.

INDUSTRIAL DESIGN TECHNOLOGY

COURSE OVERVIEW

IDT is a broad field of study that draws from a range of disciplines and community activities including engineering, manufacturing, hospitality, and information and communication. Students will explore the design of products, processes and services to meet human needs and wants, capitalise on opportunities and extend human capabilities. Technological products, processes and services have impacts and consequences on individuals, local and global communities, and environments.

The purpose of technology education in schools is to enable students to use technology successfully, responsibly and creatively. By working technologically, students develop knowledge and understanding and ways of working to expand their capabilities as confident, critical and creative designers and users of technology.

Students are challenged to extend their technological literacy when they:

- design technology solutions (products, processes and services)
- use resources (information, materials and systems)
- manage technological processes (efficiently, appropriately and safely)
- evaluate the appropriateness of solutions (aesthetic, cultural, economic, environmental, ethical, functional and social).
- Students build knowledge and understanding that enables them to develop solutions to design challenges by applying their knowledge of resources, and of relevant techniques and tools, with appropriate consideration of the impacts and consequences of their solutions. The knowledge and understanding component of Year 10 Technology is structured around three organisers:
 - products, processes and services
 - techniques and tools
 - impacts and consequences.

HOME STUDY REQUIREMENTS

Students will be given design and evaluation assignments throughout the program which directly contribute towards assessment. They will also keep a logbook of their activities in the workshop.

ASSESSMENT SUMMARY

Students demonstrate evidence of their learning over time in relation to the following assessable elements:

- knowledge and understanding
- investigating and designing
- producing
- evaluating
- reflecting

This evidence is collected through in-class tests and design and project work evaluations.

LEGAL STUDIES

COURSE OVERVIEW

This course is part of Humanities and will incorporate elements of the Australian Curriculum **Civics and Citizenship** course. The Civics and Citizenship curriculum is all about ensuring students have the skills and values to become active and informed citizens. Students will investigate political and legal systems, and explore the nature of citizenship, diversity and identity in contemporary society.

Completion of this course of study will allow students to progress seamlessly to Legal studies as an Authority subject in Years 11 and 12.

In Legal Studies particularly, students develop an understanding of the ways in which the legal system can affect the lives of Australian citizens. Through inquiry, analysis, examination and problem solving, students can make decisions which may benefit themselves and the community now and in the future. The immediate relevance of Legal Studies to students' lives should promote and motivate students to make constructive judgments and informed commentaries on the law, its system and processes. Students examine and justify their own opinions and attitudes to legal and social issues needing resolution, preparing them to participate in society as active and informed citizens.

COURSE ORGANISATION

The topics studied across the course may include:

- The Australian Legal system
- Introduction to Civil Law
- Introduction to Criminal Law
- Australia's democracy in the global context
- Australia's government policies and international legal obligations
- Features of a resilient democracy.

ASSESSMENT

Assessment items each year selected from:

- Short response test
- Extended response (exam or research)
- Multimodal presentation
- Research project.

There will be opportunities to visit the courts across Brisbane, as well as have invited guests at the school speaking on topics relevant to the course.

ADDITIONAL INFORMATION

Studying Legal studies provides students with a number of useful life skills, such as critical thinking, research and writing skills, and a meaningful historical context within which to understand their lives and the world around them. Students will develop skills and processes which assist significantly in the transition to a variety of tertiary courses; including Arts, History, Politics, Journalism, Law, Psychology, Social Work, Education, Commerce, Government, Philosophy, English, and Academic and Creative Writing.

MUSIC

COURSE OVERVIEW

Music offers a unique way for students to communicate and connect with their world using sound. Students will build on their understanding and use of the elements of music. They will extend their understanding and use of more complex rhythms and diversity of pitch and incorporate dynamics and expression in different forms. Students will experience a hands on approach to understand how music technology has evolved and enhanced the music world. Also, they will gain knowledge and understanding of Jazz and Blues music through analysing, composing, performing, soloing and improvising.

UNITS OF STUDY:

- Music Technology
- Jazz Music

HOME STUDY REQUIREMENTS

The general purpose of homework in this subject is to promote good study habits and attitudes, and to further develop students' skills. Specifically, home study will be used to for students to rehearse performance tasks, compose music and complete written tasks.

ASSESSMENT SUMMARY

Students are assessed on the composing, making and responding. Assessment tasks will take the form of:

- short and / or extended written responses
- performance tasks
- composition/arranging tasks

ADDITIONAL INFORMATION

This unit prepares students for Senior Years 11 and 12 Music and Music in Practice through the development of performance, composition and analysis skills.

PHILOSOPHY

COURSE OVERVIEW

Philosophy and Reason combines the discipline of philosophy with the associated skills of critical reasoning. The study of philosophy allows you to recognise the relevance of various philosophies to different political, ethical, religious and scientific positions. It also allows you to realise that decisions in these areas are the result of the acceptance of certain ideas and specific modes of reasoning. In addition, critical reasoning and logic provide knowledge, skills and understanding so students are able to engage with, examine and analyse classical and contemporary ideas and issues. The study of philosophy enables you to make rational arguments, espouse viewpoints and engage in informed discourse.

Through the study of Philosophy and Reason, you will collaboratively investigate philosophical ideas that have shaped and continue to influence contemporary society. These ideas include what it means to be human, how we understand the role of reason in our individual and collective lives and how we think about and care for each other and the world around us. You will analyse arguments from a variety of sources and contexts as they develop an understanding of what constitutes effective reasoning. You will formalise arguments and choose appropriate techniques of reasoning to attempt to solve problems. The collaborative nature of philosophical inquiry is an essential component for you to understand and develop norms of effective thinking and to value and seek a range of ideas beyond your own.

Units covered in this subject include:

- Fundamentals of Reason
- Reason in Philosophy
- Moral Philosophy and Schools of Thought
- Social and Political Philosophy.

Skills

- A method of learning, initiated by questions or problems
- Personal construction of a student's own knowledge, i.e. knowledge that is new to the student
- An active approach to learning, where students have the central role
- The teacher acting as a facilitator
- Developing self-directed learning over time, as students assume increasing responsibility for their learning.

HOME STUDY REQUIREMENTS

Students will be expected to conduct research for design ideas, complete design planning and refinement work when required.

ASSESSMENT SUMMARY

The assessment instruments completed across this course will consist of the following modes:

- Examination — extended response
- Extended response — analytical essay
